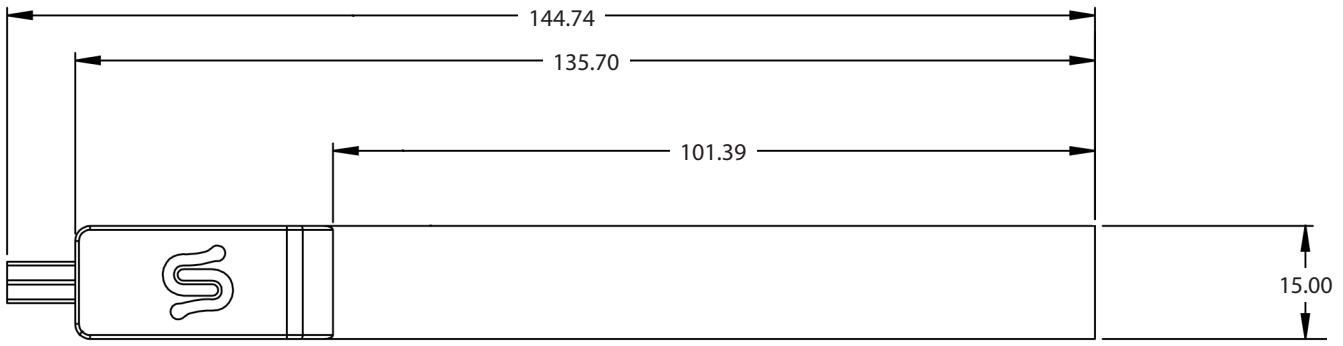
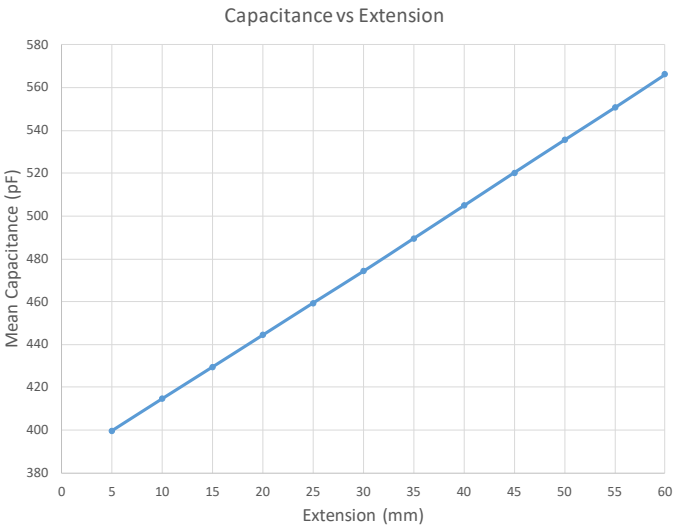
Silicone Stretch Sensor Datasheet

Sensor Dimensions



Units: mm

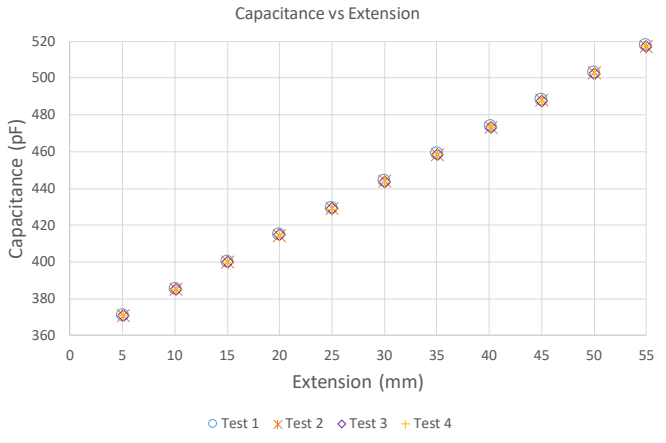
Sensor Characteristics *

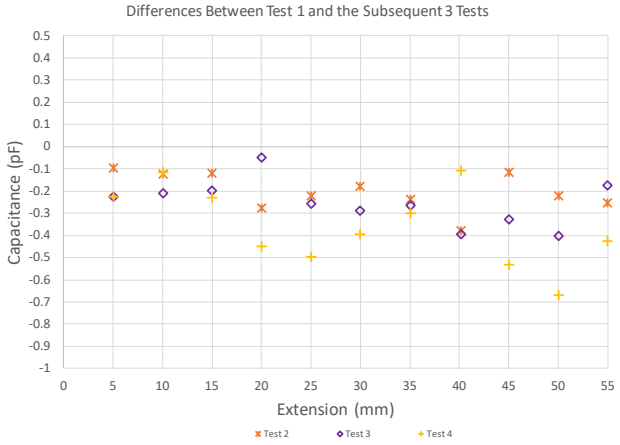


PARAMETERS	
Maximum Extension	200% strain
Average Capacitance (un-stretched)	365 pF
Average Sensitivity	2.8 pF/mm
Noise Level	0.67 pF

*These values are indicative of the sensors. Individual sensors may vary.

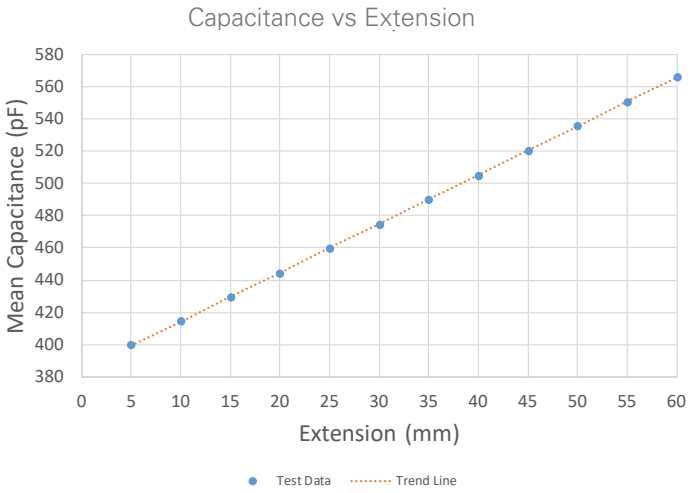
Repeatability





The Silicone Stretch Sensor exhibits highly repeatable behaviour. When testing a sensor's capacitance vs. extension relationship four times, the difference in capacitance values across all four tests is no greater than 0.67 pF.

Linearity



For the shown range, the maximum difference between the mean capacitance values and the trendline is 0.7 pF.

Disclaimer, Intellectual Property and Licensing

All resources including technical information, statements and recommendations are based on information StretchSense believes to be reliable, but the accuracy or completeness is not guaranteed. StretchSense is not liable for any loss of profit, revenue, savings, business, use, data (including data and design inputs), and/or goodwill or consequential, indirect, incidental or special damage or loss of any kind under or in connection with these resources.

StretchSense has licensed technology from Parker Hannifin Corporation and from Auckland UniServices Limited:

PARKER HANNIFIN CORPORATION

StretchSense products that utilise certain dielectric electro-active polymer (DEAP) technology are manufactured and supplied under licence from the Quick Coupling Division of Parker Hannifin Corporation, Minneapolis, MN, USA ("Parker"). Such licence enables StretchSense to manufacture and supply Parker DEAP transducer products generally for evaluation and application validation purposes, and commercially for consumer electronics, motion capture and augmented/virtual reality, and sports and fitness industries. Commercial use in other industries is subject to Parker's prior consent.

AUCKLAND UNISERVICES LIMITED

StretchSense products that utilise certain sensor and dielectric elastomer generator technologies are manufactured and supplied under license from Auckland UniServices Limited in Auckland, New Zealand ("UniServices"). These licensed technologies originally being created by the Biomimetics Lab at the Auckland Bioengineering Institute. Such license enables StretchSense to manufacture and supply sensor and dielectric elastomer generator products for evaluation, application validation, and commercial purposes for all fields.
